

I pay for my XM service and receive the quality programing that I expect. This includes music, weather and traffic updates. I didn't know that the National Association of Broadcasters assumed that traffic and weather information was information that should only be broadcasted on AM & FM stations. What they should be concerned with is making sure that there is quality programing on AM & FM stations.

I respectfully request that you reject the NAB's petition 04-169.
